

ABSTRACT OF THE DISCLOSURE

Spray paint can mixer apparatus includes a housing in which is disposed a relatively low speed motor. Extending outwardly from the housing and connected to the motor is a spray paint can holder assembly. The spray paint can holder assembly holds a can of spray paint and rotates in response to rotation of the motor to mix paint within the can. The motor rotates the spray paint can holder assembly and the spray paint can secured thereto at a relatively low RPM so that the mixer ball or element within the spray paint can is able to move freely for the mixing operation. Different embodiments of spray paint can holder assemblies are disclosed.
